

The steam engine was first constructed by Andarer Talen, the Great Builder.

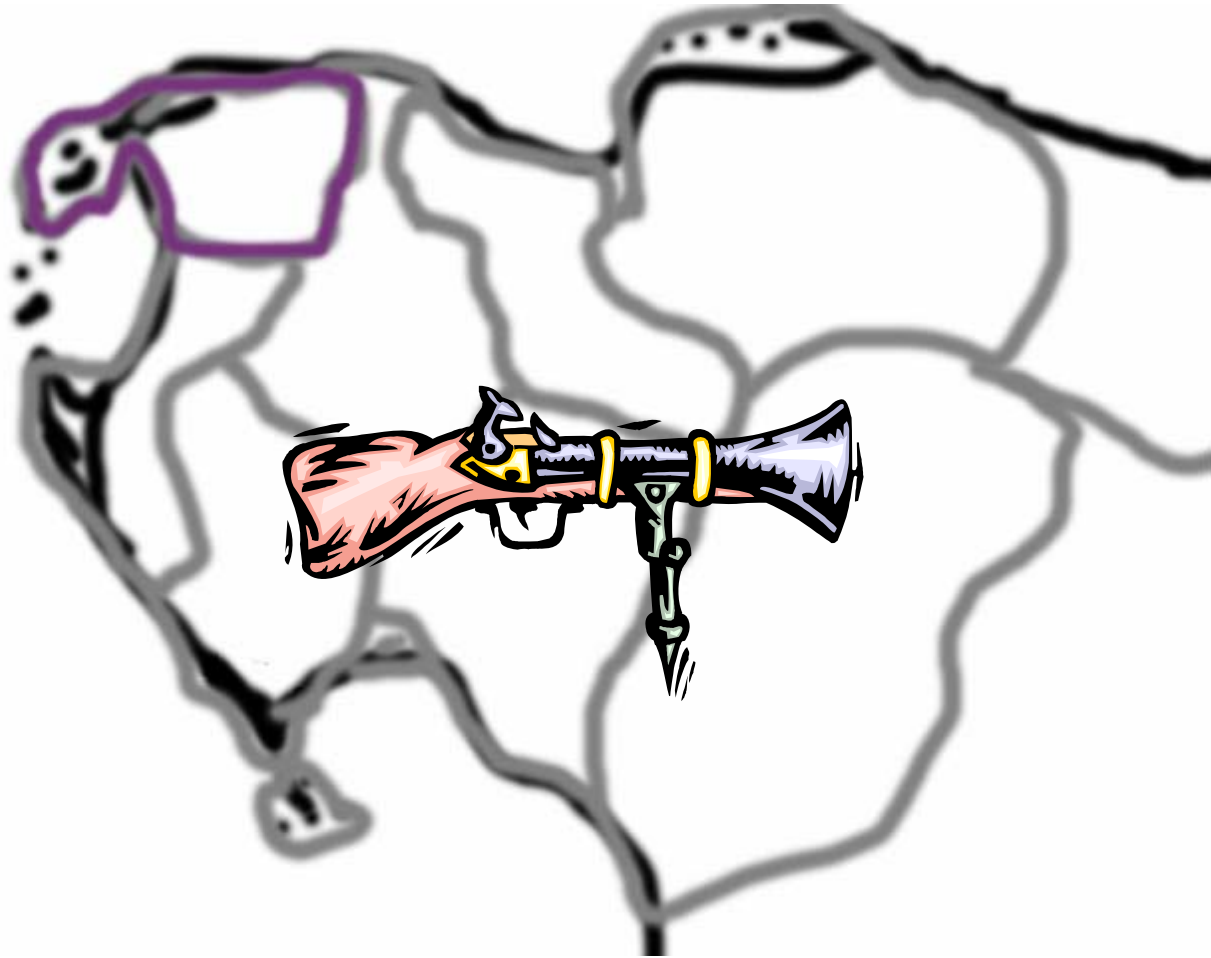

The steam engine was first constructed by Andarer Talen, the Great Builder.

With it and many other contraptions, Talen brought great wealth and power to his nation.

With it and many other contraptions, Talen brought great wealth and power to his nation.

With it and many other contraptions, Talen brought great wealth and power to his nation.

With it and many other contraptions, Talen brought great wealth and power to his nation.

Others, hungry for greater power, soon joined them

Either completely, or as allies

Wanting to expand their borders, they started a great and costly war

It was then the automaton, powerful self-acting machine, was created.

The perfect army

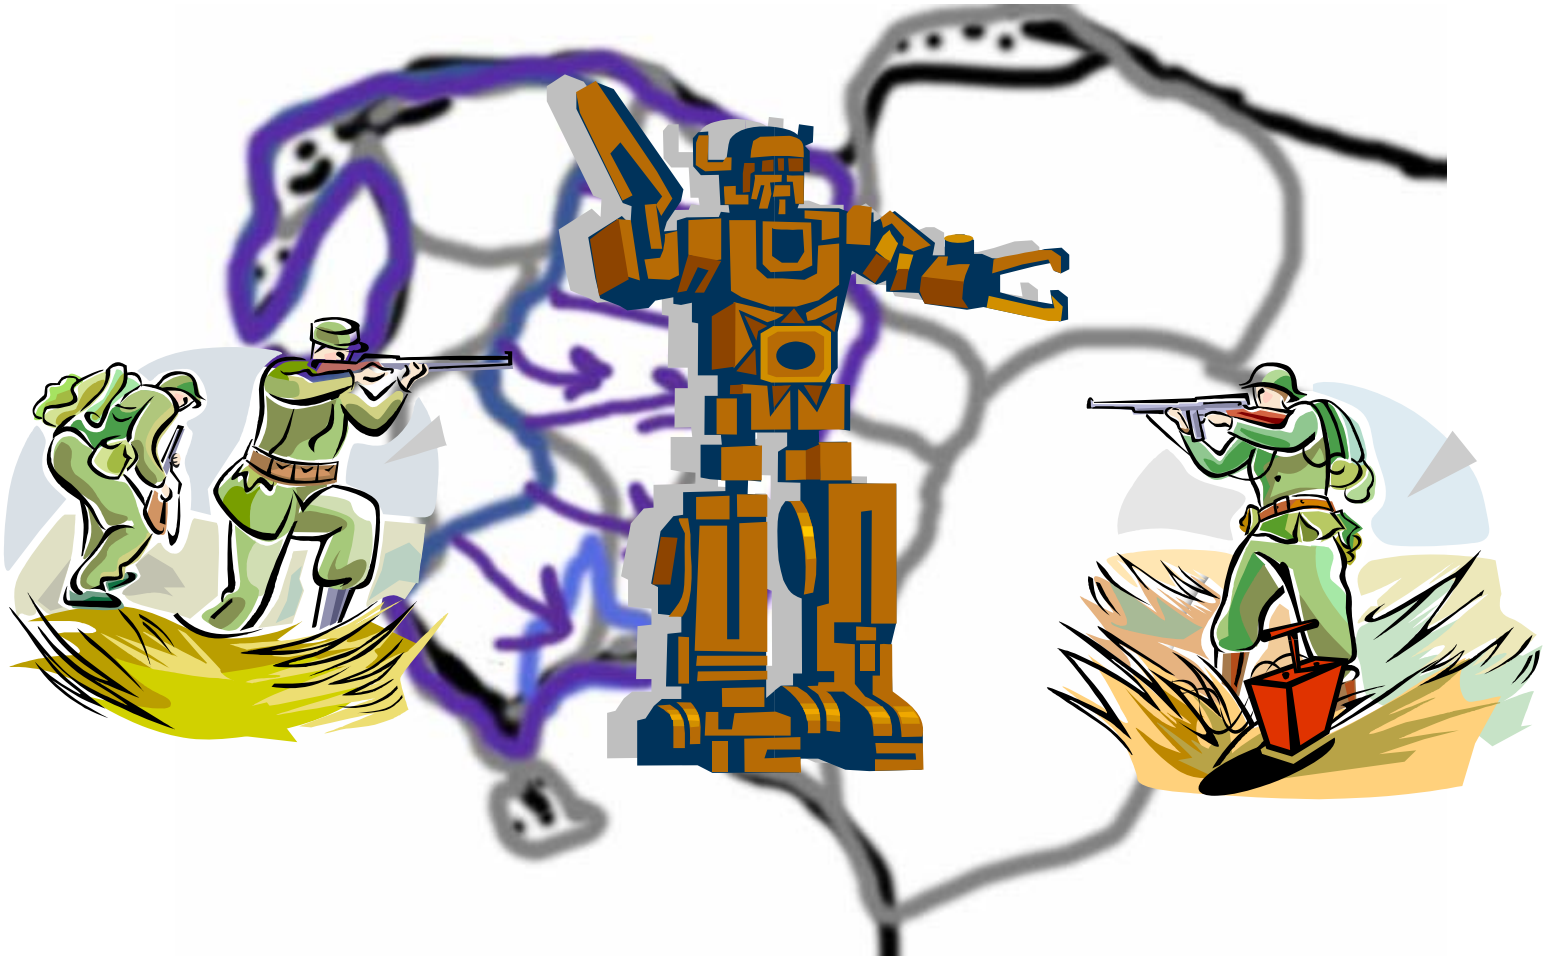

With these newfound forces they could conquer both enemies and allies.

With these newfound forces they could conquer both enemies and allies.

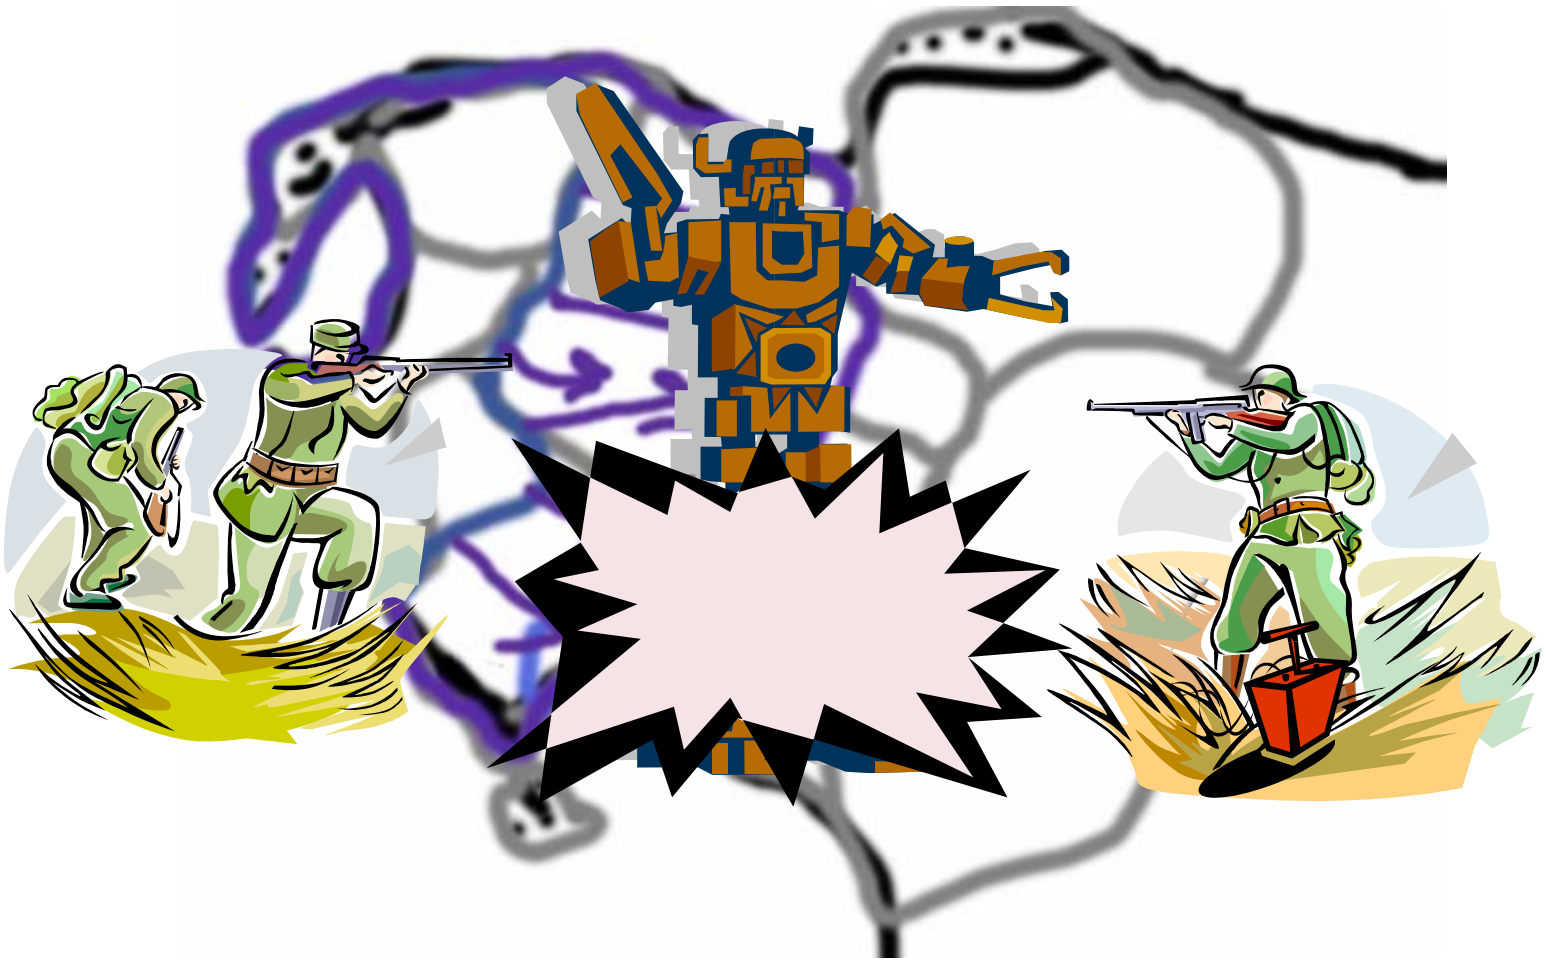

Form this point on, they would be known as the empire

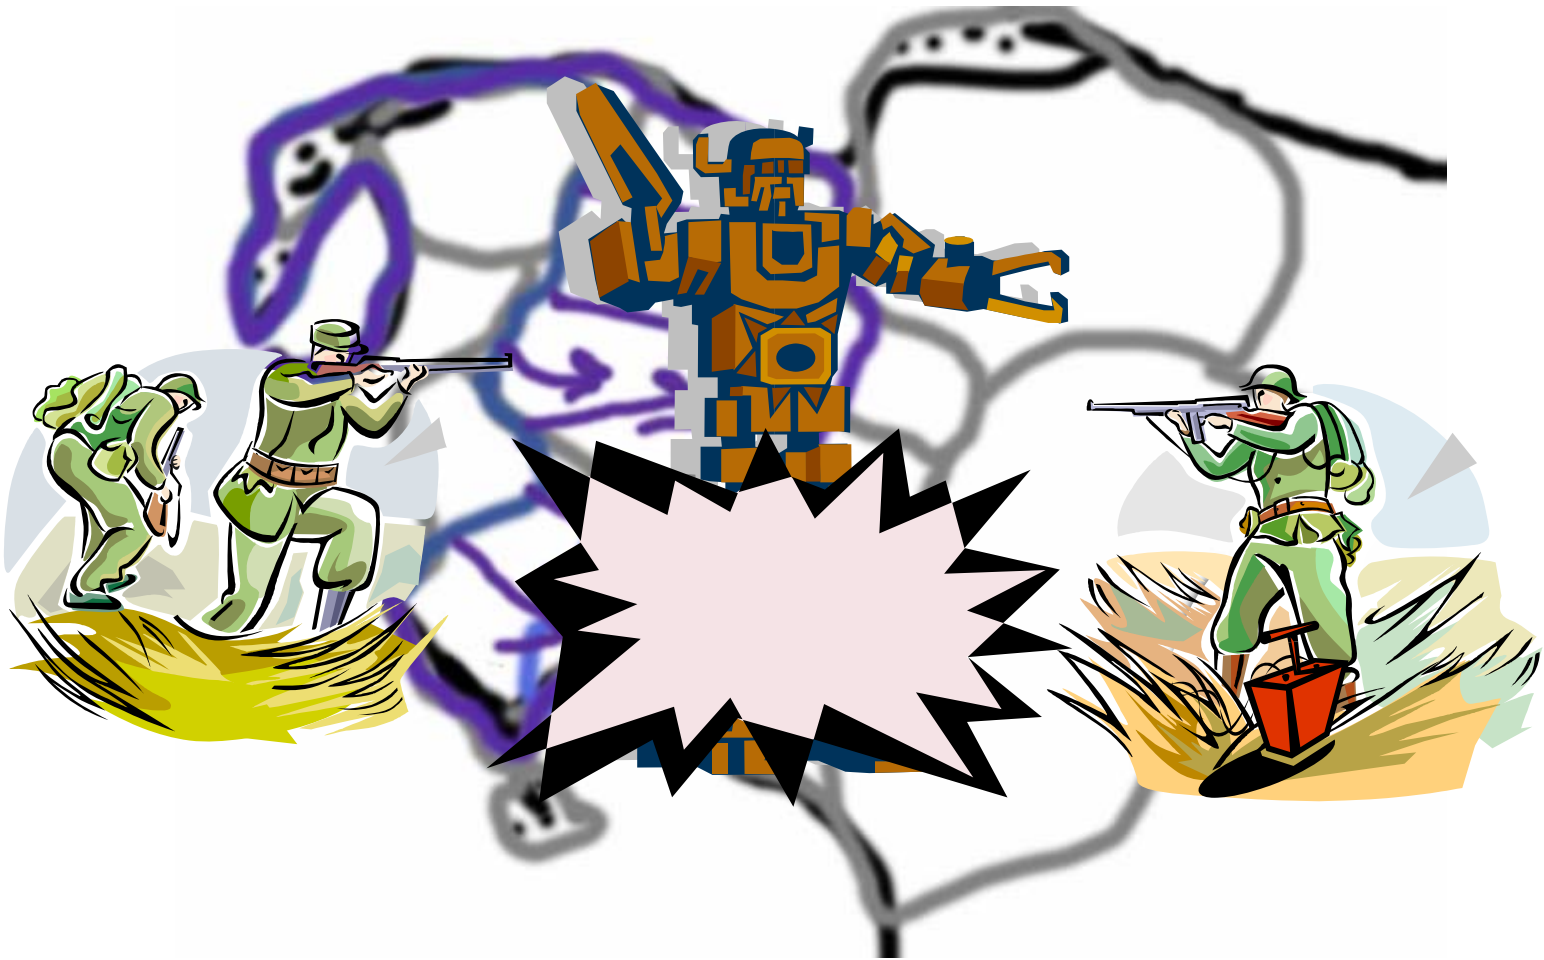

However, they now found themselves fighting rebel bands instead of armies

Rebels that used wits instead of force

Clearly, a countermeasure was needed

The solution was the Unit of Four.
